Svelte Medical Weight Management

Dear Patient,

We would like to welcome you to our office. Our medically supervised program will provide you with the foundation to accomplish your weight loss goals quickly and safely.

Your program begins with a consultation with a member of our medical staff. During this time you will be instructed on our nutritional and exercise plan that has been selected based on your individual needs. A comprehensive blood panel, an EKG, and your weight and body fat index measurement will be performed. You will also be provided with a basic exercise regimen, which is a very important component to a successful weight loss program.

Our physician will then evaluate your medical and weight history, and make the appropriate recommendations for your individualized program. You will be prescribed and dispensed a Food and Drug Administration (FDA) approved appetite suppressant, which has been proven to be safe and effective for many years.

Our program requires weekly scheduled visits to assess your progress, dispense your medication, and make any indicated changes. We take great pride in our program, and thank you for your interest.

Kind Regards,

Dr. Bragg and Staff

Svelte Medical Weight Management

Appetite Suppressant and Weight Loss Consent

I hereby authorize Dr. Bragg and associates to assist me in weight reduction. I understand that my program may consist of a balanced calorie deficient diet, regular exercise program, ZONE Wellness, and lifestyle changes. I also understand that appetite suppressants, other medications, and injections may be used in my program for up to and possibly more than 12 consecutive weeks. Appetite suppressants labeling suggestions are based on short-term studies of 12 weeks. The experience of Bariatric physicians, as well as recent long-term studies of university-based investigators, has shown that appetite suppressants, supplements and injections are effective for longer than 12 weeks.

Dr. Bragg and associates believe in the off label use of medications proven to be effective in medical studies to promote weight loss and in the use of nutritional supplements and injections. These injections, nutritional supplements and medications can help you lose weight faster and make you feel better while you are losing weight. These nutritional supplements, injections and medications can boost your energy, burn fat faster, and eliminate cravings. There are those practicing Bariatric Medicine that do not hold to these beliefs regarding the effectiveness of nutritional supplements, injections, and medications. Many of these physicians believe that in order to lose weight you simply need to exercise or and eat fewer calories. Dr. Bragg and associates disagree with this simplistic thinking, and believes that the nutritional supplements and injections that are prescribed are effective and therapeutic. If you have any problems or questions, please inform one of our medical associates immediately.

I understand there are other ways and programs that can assist me in my desire to decrease my body weight and to maintain this weight loss. In particular, a balanced calorie counting or an exchange-eating program without the use of the appetite suppressants would likely prove successful if followed, even though I would probably be hungrier without the appetite suppressants.

In order to continue to receive appetite suppressants, other medications, and injections depends on continued weight loss. The use of appetite suppressants, other medications, and injections involves potential risks. Reported side effects include: nervousness, sleeplessness, headaches, dry mouth, weakness, tiredness, medication allergy, high blood pressure, rapid heart beat, and heart irregularities. Less common, but more serious risks are valvular heart disease. These and other possible risks could, on occasion, be serious or fatal.

I understand that there are risks associated with obesity. Among these risks are tendencies to high blood pressure, diabetes, heart attack and heart disease, arthritis of the joints, hips, knees, and feet. I also understand that thirty to forty percent of overweight or obese patients may have or develop gallstones. A large percent of this group will develop significant gallbladder disease during their lifetime. I also understand that rapid weight loss programs may increase the incidence of symptomatic gallbladder disease.

I understand that if I develop side effects from the diet or the medication, I will discontinue the diet and/or the medication and notify a member of your medical staff immediately. I also understand that if the problem is severe, I will go to the nearest Emergency room or see my primary care physician as soon as possible.
